BOOK SYNOPSIS

The new "Sports Medicine in the Pediatric Office" is a comprehensive resource for the evaluation and treatment of musculoskeletal problems in children and adolescents. It is the first pediatric sports medicine text that uses CD-ROM technology to allow readers to view anatomy and physical examination techniques for exam skill development. The text uses case-based examples to address common issues seen in the pediatric office such as knee, elbow, and ankle injuries. The common injuries include shoulder, wrist/elbow, ankle/foot, knee, leg, and hip/spine. Musculoskeletal examination with video demonstration includes step-by-step physical examination and corresponding digital anatomic illustration of each body area. The short topic chapters cover specific medical, non-orthopedic topics with charts and tables.
